

## Exercise: Optimizing a Dashboard

1. Download and save the given .pbix file.
2. Publish it in Power BI Service.
3. When published, create a new dashboard named **Product Sales**.
4. Pin all tiles from **Products** and **Categories** pages of the uploaded .pbix file.

The screenshot shows the Power BI service interface with the dashboard titled "Adventure Works Optimizing-a-dash". The dashboard features four main tiles: "Units Sold" (6560), "Revenue" (3.51M), "Profit" (45.81K), and "Revenue Growth" (20.73%). Below these are two visualizations: a donut chart titled "Units sold by product color" and a bar chart titled "Top 5 Products". The bar chart shows sales for Mountain-200 Black 38, Mountain-100 Black 42, Mountain-100 Black 44, Mountain-100 Black 48, and Mountain-200 Black 42. The right side of the screen displays the "Visualizations" and "Data" panes. A red arrow points to the pinning icon on the left side of the dashboard page.

The screenshot shows the "Pin to dashboard" dialog box. It includes fields for selecting an existing dashboard ("Product Sales" is selected) and a "Pin" button. A red arrow points to the "Select existing dashboard" dropdown, and another red arrow points to the "Pin" button.

5. Optimize the **Product Sales** dashboard for mobile viewing.

The screenshot shows a Power BI dashboard titled "Product Sales". It features a logo for "ADVENTURE WORKS" with a sun and mountain icon. Below the logo are two large, dark-colored tiles: one green for "Units Sold" (6560) and one orange for "Revenue" (3.51M). To the left of the dashboard is a sidebar with various workspace and report options. In the top right corner, there is a red arrow pointing to the "Edit" button, which has a dropdown menu open. The menu includes options like "Add a tile", "Dashboard theme", and "Mobile layout".

6. Arrange them in the way that it tells a comprehensive story.

The screenshot shows the same "Product Sales" dashboard after rearranging the tiles. The mobile layout now contains four tiles: "Units Sold" (6560), "Revenue" (3.51M), "Profit" (45.8...), and "Revenue Growth" (20.7...). The dashboard also includes a section for "Top 5 Products" with a bar chart. The sidebar and top navigation remain the same as in the previous screenshot.
